When accessing the API using a cross-domain AJAX request (CORS), set this to the originating domain. This must be included in any pre-flight request, and therefore must be part of the request URI (not the POST body). This must match one of the origins in the `Origin` header exactly, so it has to be set to something like **https://en.wikipedia.org** or **https://meta.wikimedia.org**. If this parameter does not match the `Origin` header, a 403 response will be returned. If this parameter matches the `Origin` header and the origin is whitelisted, an `Access-Control-Allow-Origin` header will be set.
