

1. Lab testing

- Andor camera set up for remote testing in lab, able to read out images.
- Camera test datasheet added to wiki under Lens Coatings and Andor CCD (and here).
- Next steps include setting up dark room and star representation.

2. Acceptance Test Procedure

- Draft lab ATP for comment
- Various worksessions to be held over upcoming weeks to finalise acceptance criteria and indicate test methods.

3. Linux version

- Standard Ubuntu (20.04) confirmed by Carel.

4. Pipelines

- SAAO has a preference for the python-based Aspired spectroscopy pipeline.
- Python-based imaging pipeline for SHOC cameras under development at SAAO - this will be ported to Mookodi when ready.
